# Populate data in the raw tables:
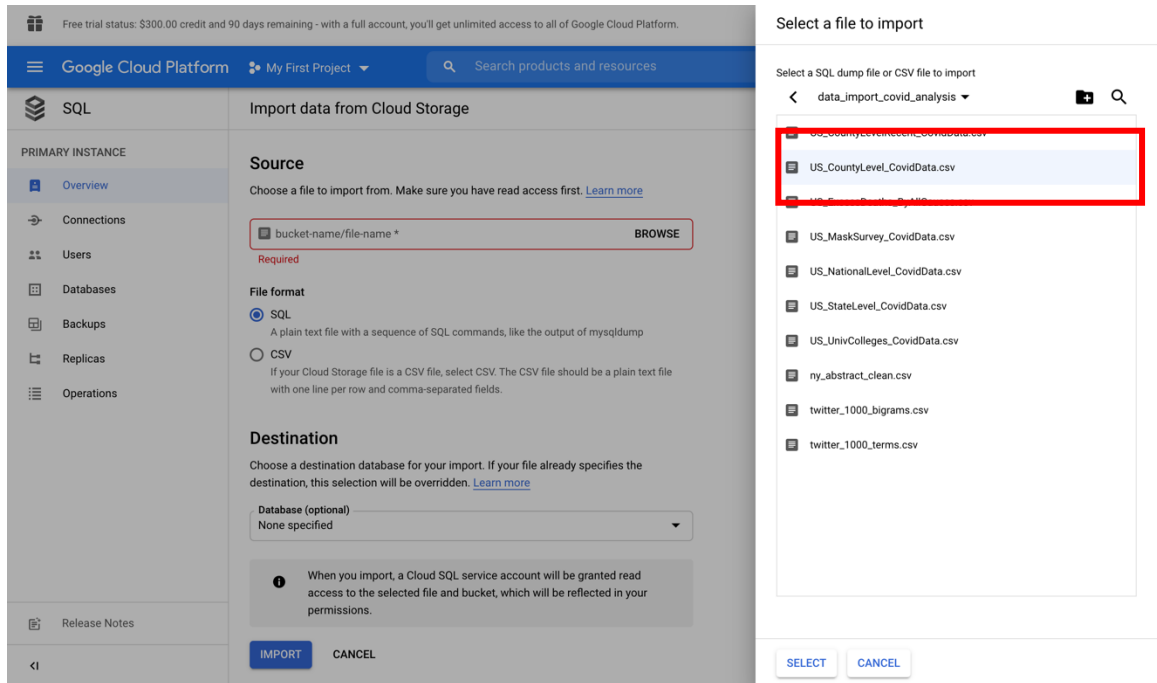

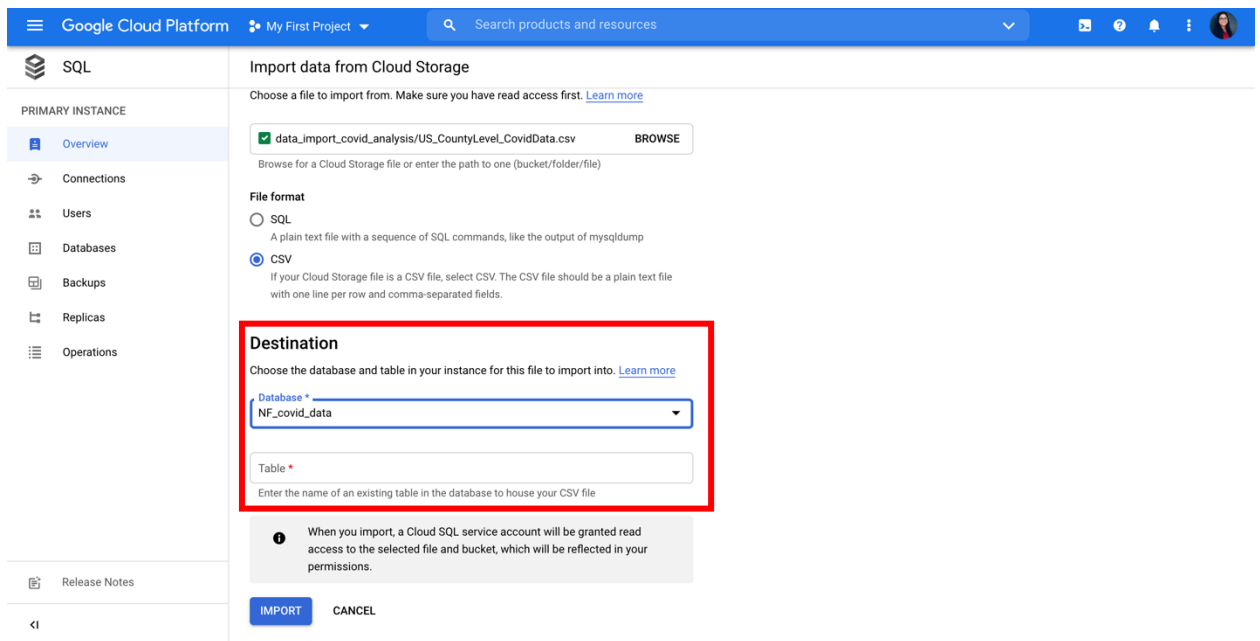

**Google Cloud Platform**

1. Selected IMPORT

2. Then, we browsed and selected the bucket data_import_covid_analysis (bucket contains the data files)

3. Then, we selected the file to import

4. Next, we selected the file format as csv
5. In "Destination", we selected the database created i.e. NY_covid_data

6. Finally, we chose the table from the database to insert the values into and clicked IMPORT.
7. Repeated the steps from 3 to 6 till all the tables were populated
